## SUMMARY

The study compares the cost to the government of TDY travel by POV, rental car and command aircraft. It considers various cases where the number of employees on TDY changes from 1 to 10 and where the scenario changes from Picatinny to Ft Monmouth, to Watervliet Arsenal, to APG, and to Washington, DC. Assumptions are made to lend credibility to the analysis.

INTRODUCTION: The Cost Analysis Division has performed a study to determine the most cost effective mode of transportation between command aircraft, POV, and rental car. The details of the analysis (Appendix A) and results provided in the body allow for a speedy decision of the least expensive mode of transportation provided that the mission generally conforms to the scenario provided.

SCENARIO: The inclosed analysis involve a meeting to be held between 0900 hours and 1400 hours the same day. The meeting will require the presence of a number of employees from ARRADCOM ranging from one to ten. In addition, summary data is provided for meetings that extend to two, three and four days. In all cases, however, the scenario provided examines meetings that begin at 0900 hours of the first day and conclude business at 1400 hours of the last day.

ASSUMPTIONS:

- (1) Travel by auto would necessitate arriving at TDY the night before the meeting when the TDY location was in excess of two hours driving time of ARRADCOM.
- (2) When arriving at TDY site the night before the meeting, travelers would leave ARRADCOM at a time to allow arrival in TDY vicinity at approximately 1630 hours.
- (3) When traveling by auto, no more than four employees will occupy one automobile.
- (4) When traveling by command aircraft to meetings in excess of one day the aircraft would make an additional round trip in which no passengers are transported.
- (5) When traveling by command aircraft to meetings in excess of one day to TDY sites where no government quarters are available rental cars would be authorized.
- (6) Average distance from employees residence to ARRADCOM is approximately 15 miles.

SELECTION OF TDY LOCATIONS FOR STUDY: Four locations were selected for this study. Two of the trips (Watervliet Arsenal and Aberdeen Proving Ground) were chosen because both trips were within 150 to 200 mile range of HQ ARRADCOM and both required overnight accommodations when traveling by auto. In addition, the Aberdeen Proving Ground study offered a look at the impact on the cost comparison when government quarters were available while the Watervliet Arsenal study involved no government quarters. The analysis to Ft. Monmouth was selected because it offered a trip to a location that was within 100 miles of ARRADCOM and did not require an overnight stay when traveling by auto to a one day meeting. The trip to the Washington D.C. area was chosen because it involved a trip in excess of 200 miles and a location with a high frequency of TDY's. The inclosed analysis may be used as a reasonable alternative to performing repetitive analysis of related travel situations.

DIFFERENCES BETWEEN MODES OF TRANSPORTATION:

(1) POV vs. Rental Car - The cost of rental car is consistently greater to the government for two reasons: (a) The total mileage cost is greater (See Appendix B), and (b) there is a loss in employee productive time while picking up the rental car. It should be noted that the cost differential between these two alternatives is, in most cases, less than 10%. In every case where the POV is the most cost effective mode of transportation it can be replaced by the rental car as the second best choice for employees unable to use their own automobile.

(2) C12D aircraft vs. YU21 aircraft - The difference in cost to the government between use of these two fixed winged aircraft is minimal. For one passenger the cost difference was 5% for the Washington D.C. trip. For two passengers the difference was 4% and for 3 and 4 passengers the difference was 3%. This represented a cost difference of less than \$30 and is considered negligible. The cost difference for the APG and Watervliet trips were similar. It can be concluded from these small differences in cost that use of either aircraft for 1,2,3 and 4 passengers would result in approximately the same cost to the government.

CONCLUSIONS

(1) ONE DAY MEETINGS - The trips to areas requiring overnight stays, when traveling by auto, each came up with the same least expensive mode of transportation for the same specific number of travelers. The Ft. Monmouth trips, which did not require an overnight stay are slightly different. The following table summarizes the conclusions of the study for one day meetings.

ANALYSIS I  
ARRADCOM (DOVER SITE)

TO

ABERDEEN PROVING GROUND (APG), MARYLAND

The following analyzes the costs involved in travel to a meeting at APG for a number of employees ranging from one to ten. This meeting will begin at 0900 hrs. and conclude business at 1400 hrs the same day. Costs of travel by Command aircraft, privately owned vehicle and rental car are considered. Assume travel by either mode of automobile will necessitate arriving at TDY the night before the meeting. The supporting rationale represents costs for each mode of transportation.

<u>Number of Passengers</u>	<u>POV</u>	<u>Rental Car</u>	<u>UH-1H</u>	<u>C12D</u>	<u>YU21</u>
1	\$ 371	\$ 420	\$ 983	\$ 476	\$454
2	\$ 650	\$ 721	\$1096	\$ 573	\$550
3	\$ 924	\$1021	\$1210	\$ 669	\$646
4	\$1199	\$1321	\$1323	\$ 765	\$742
5	\$1570	\$1740	\$1437	\$ 861	N/A
6	\$1848	\$2042	\$1550	\$ 958	N/A
7	\$2123	\$2341	\$1664	\$1054	N/A
8	\$2398	\$2641	\$1777	\$1150	N/A
9	\$2769	\$3061	\$1891	N/A	N/A
10	\$3047	\$3362	\$2004	N/A	N/A

NOTE: Extrapolation of the data for 2, 3 and 4 day meetings indicates the least expensive mode of transportation for 1, 2 or 3 employees is by POV assuming all three employees are in the same POV. For 4 employees the least expensive is the YU21 Aircraft and the C12D is the least expensive for 5, 6, 7 or 8 travelers. For 9 and 10 passengers the most cost effective single mode is the UH-1H helicopter. However, where schedules permit, a combination of the YU21 and C12D aircraft is the least expensive for 9 or 10 passengers. An additional assumption for the 2, 3 and 4 day meetings is that the command aircraft would require an additional round trip where no passengers were transported.

ANALYSIS II  
ARRADCOM (DOVER SITE)

TO

WATERVLIET ARSENAL, NEW YORK

The following analyzes the costs involved in travel to a meeting at Watervliet Arsenal for a number of employees ranging from one to ten. This meeting will begin at 0900 hrs. and conclude business at 1400 hrs the same day. Costs of travel by Command aircraft, privately owned vehicle and rental car are considered. Assume travel by either mode of automobile will necessitate arriving at TDY the night before the meeting. The supporting rationale represents costs for each mode of transportation.

<u>Number of Passengers</u>	<u>POV</u>	<u>Rental Car</u>	<u>UH-1H</u>	<u>C12D</u>	<u>YU21</u>

NOTE: The least expensive single mode of transportation for 2, 3, and 4 day meetings is presented in the following table\*:

\*Additional assumptions for the 2 to 4 day meetings are: 1) the command aircraft would require an additional round trip where no passengers were transported and 2) rental cars are authorized for employees traveling by aircraft.

\*\*Combination of C12D & YU21 aircraft is less expensive.

ANALYSIS IV  
ARRADCOM (DOVER SITE)

TO

DARCOM, WASHINGTON D.C. AREA

The following analyzes the costs involved in travel to a meeting at DARCOM for a number of employees ranging from one to ten. This meeting will begin at 0900 hrs. and conclude business at 1400 hrs the same day. Costs of travel by Command aircraft, privately owned vehicle and rental car are considered. Assume travel by either mode of automobile will necessitate arriving at TDY the night before the meeting. The supporting rationale represents costs for each mode of transportation.

<u>Number of Passengers</u>	<u>POV</u>	<u>Rental Car</u>	<u>UH-1H</u>	<u>C12D</u>	<u>YU21</u>
1	<u>524</u>	572	1654	582	553
2	<u>919</u>	983	1797	715	687
3	1310	1392	1940	848	<u>820</u>
4	1701	1801	2084	982	<u>953</u>
5	2225	2373	2227	<u>1115</u>	<u>N/A</u>
6	2620	2784	2370	<u>1248</u>	<u>N/A</u>
7	3012	3193	2513	<u>1381</u>	<u>N/A</u>
8	3403	3603	2657	<u>1515</u>	<u>N/A</u>
9	3927	4174	<u>2800</u>	<u>N/A</u>	<u>N/A</u>
10	4322	4585	<u>2943</u>	<u>N/A</u>	<u>N/A</u>

NOTE: Extrapolation of the data for 2,3 and 4 day meetings shows the most economical mode of transportation for 1 and 2 employees is by POV. This assumes that both employees are in the same vehicle. For 3 and 4 employees the least expensive mode of transportation is via the YU21 fixed wing. The C12D becomes least expensive for 5,6, 7 and 8 employees. Where schedules permit a combination of the C12D and YU21 aircrafts is least expensive for 9 and 10 employees. Otherwise the POV is most economical for this special case. An assumption for the 2,3 and 4 day meetings is that the command aircraft would require an added round trip where no passengers were transported. Additionally, assume the costs of rented cars for employees travelling by command aircraft for 1,2,3 and 4 day meetings are included.
